AB . The additives comprise 50-90 weight% water soluble or water dispersible cellulose derivs. and 10-50 weight% formaldehyde-(alkyl)naphthalenesulfonic acid condensate salt and/or formaldehyde-melamine sulfonic acid salt copolymer. Cement mixts. are easily kneaded and extruded with the additives. Thus, 80 parts hydroxypropylmethyl cellulose (8300 cP) and 20 parts Na salt of formaldehyde-naphthalenesulfonic acid condensate were mixed to give an additive, which (1 part) was added to a mixture of cement 100, asbestos 20, and H₂O 35 parts. The mixture was extruded for torque 80 kg/cm and no dehydration was observed in the extruded product.

ST sulfonate formaldehyde copolymer cement dispersant;
cellulose deriv cement dispersant;
melamine formaldehyde copolymer cement
dispersant

IT Cement
(dispersants for, formaldehyde copolymer salts and
cellulose derivs.)

IT Dispersing agents
(formaldehyde copolymer salts and cellulose derivs., for
cement)

IT 50-00-0D, polymers with sulfonated melamines 108-78-1D, sulfonated, polymers with formaldehyde 9004-65-3, Hydroxypropylmethyl cellulose 9084-06-4, Formaldehyde-naphthalenesulfonic acid copolymer sodium salt
